

COMMUNICATION & INTERVIEW COACHING

Overview

Candidates preparing for interviews often need to improve their communication, confidence, clarity, response structure, and ability to answer role-specific questions. Traditional interview preparation generally provides static questions and sample answers but does not provide personalized feedback based on the candidate's actual responses.

Candidates may want to practice questions such as:

- “Tell me about yourself.”
- “Why are you interested in this role?”
- “Describe a challenging project you worked on.”
- “How would you handle a difficult customer or stakeholder?”
- “Explain this technical concept in simple terms.”
- “Can you evaluate my answer and tell me how I can improve it?”

An intelligent interview coaching system should understand the candidate's response, evaluate it against the question and expected competencies, identify areas for improvement, and provide actionable feedback.

Build an AI-powered Communication & Interview Coaching system that allows candidates to practice interview questions, submit text or voice responses, receive structured feedback, identify communication gaps, and improve their interview performance through personalized coaching.

Tasks

Task	Task Overview	Weightage
Task 1 – Interview Content & Candidate Profile Preparation	Prepare interview questions, role information and candidate inputs required for personalized interview coaching.	20%
Task 2 – Intelligent Interview Practice & Response Evaluation	Enable candidates to practice interview questions and receive structured feedback on their responses.	25%
Task 3 – Multi-Agent Interview Coaching & Personalized Feedback	Extend the basic evaluation system into a specialized multi-agent coaching workflow.	25%
Task 4 – Evaluation, Progress Tracking & User Application	Evaluate coaching quality and provide an interactive application for candidates to practice interviews.	20%
Task 5 – Architecture, Documentation & Demonstration	Document the complete solution and demonstrate the working interview coaching system.	10%
Total		100%

Task Details

Task 1 – Interview Content & Candidate Profile Preparation

- Prepare the interview-question and candidate information required for the coaching system.
- The solution should organize interview questions based on relevant attributes such as:
 - Role
 - Competency
 - Difficulty
 - Question type

Where candidate information is provided, the system should use relevant profile information such as skills, experience and target role to support personalized question selection.

- Define suitable evaluation criteria for assessing candidate responses.

Task 2 – Intelligent Interview Practice & Response Evaluation

- Build the core interview-practice capability.
- A candidate should be able to select or receive an interview question and submit a response through text and/or voice.
- The system should analyze the response and provide structured feedback covering areas such as:
 - Relevance to the question
 - Clarity
 - Response structure
 - Completeness
 - Communication quality
 - Strengths
 - Areas for improvement

Where applicable, the system should provide an improved response or guidance on how the candidate could structure the answer more effectively.

Task 3 – Multi-Agent Interview Coaching & Personalized Feedback

Extend the basic interview evaluation system into a specialized multi-agent coaching workflow. The implementation should include:

- **Interview Question Agent** – selects or generates suitable interview questions based on the candidate's target role and competency.
- **Communication Analysis Agent** – evaluates clarity, structure, conciseness and communication quality.
- **Content Evaluation Agent** – evaluates whether the response addresses the question and demonstrates relevant knowledge or experience.

- **STAR/Response Structure Agent** – evaluates behavioral responses using an appropriate response structure such as Situation, Task, Action and Result.
- **Interview Coach Agent** – consolidates the outputs from the specialist agents and generates personalized coaching feedback.

The system should also demonstrate:

- Agent handoff for deeper response analysis.
- **A2A communication** where applicable.
- Personalized follow-up questions based on the candidate's answer.
- Identification of recurring communication or response-quality gaps.
- A personalized improvement plan based on the candidate's performance across practice sessions.

Task 4 – Evaluation, Progress Tracking & User Application

Evaluate the quality and consistency of the interview coaching system. The evaluation should consider:

- Question relevance
- Response-analysis quality
- Feedback consistency
- Evidence supporting identified strengths and weaknesses
- Usefulness of improvement suggestions

A simple front-end should allow candidates to:

1. Select a target role or interview category.
2. Receive an interview question.
3. Submit a text or voice response.
4. View the response analysis.
5. Review strengths and improvement areas.
6. View personalized coaching suggestions.
7. Practice follow-up questions.
8. Track improvement across multiple sessions where implemented.

Task 5 – Architecture, Documentation & Demonstration

- Provide complete technical documentation and demonstrate the working solution. The architecture should clearly show:
Candidate → Interview Question → Response → Response Analysis → Specialist Agents → Coaching Feedback → Improvement Plan
- The documentation should explain the major technical decisions, agent workflow, evaluation approach and design trade-offs.
- The executable implementation and README should allow another user to set up and run the solution.

Deliverables

1. Architecture Diagram

- Include a high-level view of your system in JPEG or PDF.
- Show how data is processed from the interview-question/candidate inputs through to the final coaching response.

2. Design

- Articulate system design decisions taken and the trade-offs made.

3. Full Executable Code (Microservice)

- Focus on clarity and modularity.
- Provide a README explaining:
 - Project setup (how to install or run)
 - Sample usage (e.g., an interview question, candidate response and resulting coaching feedback)

4. Panel Presentation (10 minutes)

- Demo of your working solution outlining the design and approach (8 minutes).
- QCA (2 minutes).

Dataset Name

Interview Questions / Candidate Communication Dataset

Primary Dataset

[RecruitView – Hugging Face Dataset](#)

Alternative Links / Datasets

1. Awesome Interview Questions – Hugging Face

[Interview Questions Dataset – Hugging Face](#)

2. Interview Questions – GitHub

[Public Interview Questions CSV – GitHub](#)

3. Continuum Open-Source Interview Questions

[Continuum Interview Questions – GitHub](#)

Format

CSV / JSON / Text, depending on the provided dataset.

Key Fields

Question, role, competency, difficulty, question type, candidate response, expected competency and evaluation criteria.

Reason

The interview dataset provides the information required to support intelligent question selection, candidate-response evaluation, communication analysis, personalized coaching, follow-up questioning and interview-practice feedback.
